FOCUS AUDIO

Classic Series

Focus Audio's design team applies cutting edge scientific methods such as computer aided measurement techniques as well as rigorous listening evaluation sessions and exceptional speaker manufacturing process to design loudspeakers that surpass performance standards set by even the most demanding speaker designers and audiophiles.

Focus Audio continuously strives to improve its design through unique evaluation and assurance process specially formulated by the Focus Audio design team. The result often exceeds our own expectations in almost every area of sonic performance.

- Foot tapping musicality
- See through transparency
- Startling dynamics
- Blinding transient speed and recovery
- Exceptional tonal balance
- Exacting timbral accuracy
- Focused image
- Three dimensional soundstage

These important sonic attributes are achieved without having to spend thousands of dollars on powerful amplification systems just to drive them.

Focus Audio speakers are specifically engineered with a smooth, easy to drive impedance characteristic suitable for use with a wide variety of amplifiers.

Focus Audio products are engineered to bring both high value and affordability to the music lover.

Our designs start with a thorough understanding of the intended space in the listener's home. For smaller spaces, the Models FC6 SE and FC7 SE can thrill even the most demanding and critical of listeners with stunning transparency, neutrality, musicality and lightning speed. In a more spacious listening environment, the Models FC8 SE and FC9 SE have the uncanny ability to recreate the life and scale of the original musical performance when so recorded. This unique level of performance and design perfection is available all throughout the new Classic Series.

For those who are looking for high definition home theater reproduction, the FCC1 SE and FCC2 SE centers are perfect match to the other Classic Series speaker models.
